Key Benefits:

Quick Installation! Can be mounted in 1-2 minutes with a click-and-bend system that only requires an adjustable spanner. No casting needed; simply dig into the ground.

High Quality and Self-healing surface. The Base Mount is from Aluzink, known for its superior corrosion resistance, ideal for anchoring in soil. This material is well-proven in similar applications across Europe.

Flexible Bolt Spacing. Compatible with current and future poles, including lighting and security bollards.

Stable in All Soil Types. Adjustable base plate, which can be folded out or in, enhances stability in various soil types, whether it's narrow cable trenches, sand, clay, or lighter soils.

ONEPOLE PRO BULLSEYE: A unique leveling tool that ensures poles are installed perfectly level, saving time during the installation of the foundation and poles.
